HOW TO KEEP YOUR CAR LOOKING
LIKE NEW

Plastic & Tire Protection — NanoFlex™
NanoFlex™ restores plastic trim and rubber surfaces while creating a ceramic layer that keeps them looking new. It rejuvenates aging rubber, maintains a deep black finish and provides long-lasting protection.

Wheel & Caliper Protection
Wheels experience intense heat, brake dust, and road debris. This ceramic coating protects metal and chrome surfaces from road conditions. It keeps wheels cleaner for longer, reduces staining and enhances long-term durability.

Glass & Headlight - Everything Glass™
Clear visibility is essential for safe driving. This glass coating creates a non-stick surface on windshields and headlights, helping repel water, ice, bugs and debris. With up to two years, it enhances visibility in all weather conditions and keeps lenses cleaner, brighter and more polished.

WHAT IS LIQUID PPF AND WHY IT'S
BETTER FOR DAILY DRIVERS

Nanopro® Liquid PPF (LPF) uses the same protective concept as traditional PPF but in a more advanced form. Applied as a liquid, LPF cures into a seamless polyurethane-acrylic protection film with higher tensile strength for better defense against rock chips, abrasions and road debris—without any seams or edges!

While traditional PPF can take 3-5 days to install, LPF can be applied in under 6 hours. One LPF kit costs about ¼ the price of a standard roll of film and because it bonds permanently, it eliminates the ongoing cost of yearly reapplications.

Nanopro® LPF includes a 10-year warranty and can be paired with Borophene or Borograph for ultra-durable, permanent protection.

WHAT IS BOROPHENE & BOROGRAPH

Nanopro® introduces Borophene and Borograph ceramic coatings—known for extreme strength, heat resistance and unmatched gloss. These advanced coatings create a permanent protective layer that shields paint from UV damage, oxidation, etching and daily wear.

As the sole manufacturer of Borophene and Borograph coatings, Nanopro® offers protection no other brand can match. The formulations are designed to permanently bond to the vehicle's surface, allowing a single layer to provide long-term protection, unmatched gloss and hydrophobicity. Every installation is CARFAX registered and backed by a permanent warranty, ensuring long-term value for any vehicle owner.

WHY NANOPRO?

Nanopro® develops the world's most advanced ceramic coating technologies—all formulated in-house by our engineering team in Florida.

What Sets Us Apart:

- Industry-leading permanent ceramic coatings
- The *ONLY* manufacturers of Borophene & Borograph
- Single-layer, permanent bonding
- CARFAX-registered installations
- Highest gloss indexes in the world

Nanopro® coatings deliver superior durability, shine and long-term protection for every type of vehicle.
